Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Figure	6
Circle	5
Rectangle	8

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Circle	Derived class representing a circle, inheriting from the Figure class	5
Figure	Base class representing a geometric figure with common properties and methods	6
Rectangle	Derived class representing a rectangle, inheriting from the Figure class	8

Chapter 3

Class Documentation

3.1 Circle Class Reference

Derived class representing a circle, inheriting from the [Figure](#) class.

```
#include <rectangle.h>
```

Inheritance diagram for Circle:

Collaboration diagram for Circle:

Public Member Functions

- [Circle](#) (float r=0.5)
Constructor for the [Circle](#) class.
- void [display](#) ()
Function to display the circle.

Additional Inherited Members

3.1.1 Detailed Description

Derived class representing a circle, inheriting from the [Figure](#) class.

3.1.2 Constructor & Destructor Documentation

3.1.2.1 Circle()

```
Circle::Circle (  
    float r = 0.5 )
```

Constructor for the [Circle](#) class.

Parameters

<i>r</i>	Radius of the circle.
----------	-----------------------

The documentation for this class was generated from the following files:

- rectangle.h
- rectangle.cpp

3.2 Figure Class Reference

Base class representing a geometric figure with common properties and methods.

```
#include <rectangle.h>
```

Inheritance diagram for Figure:

Public Member Functions

- **Figure** (float **angle**=0)
*Constructor for the **Figure** class.*
- void **move** (float dx, float dy)
Moves the object by a specified vector.
- void **rotate** (float dalpha)
Rotates the figure by a specified angle in degrees.
- virtual void **display** ()=0
Pure virtual function to display the figure.

Protected Attributes

- float **angle** = 0
Rotation angle in degrees.
- float **x** = 0
- float **y** = 0
- float **red** = 1
Color components in the range <0;1>.
- float **green** = 1
- float **blue** = 0
- bool **is_visible** = true

3.2.1 Detailed Description

Base class representing a geometric figure with common properties and methods.

3.2.2 Constructor & Destructor Documentation

3.2.2.1 Figure()

```
Figure::Figure (  
    float angle = 0 )
```

Constructor for the **Figure** class.

Parameters

<i>angle</i>	Initial rotation angle in degrees.
--------------	------------------------------------

3.2.3 Member Function Documentation

3.2.3.1 move()

```
void Figure::move (
    float dx,
    float dy )
```

Moves the object by a specified vector.

Parameters

<i>dx</i>	The change in the x-coordinate.
<i>dy</i>	The change in the y-coordinate.

3.2.3.2 rotate()

```
void Figure::rotate (
    float dalpha )
```

Rotates the figure by a specified angle in degrees.

Parameters

<i>dalpha</i>	The angle in degrees.
---------------	-----------------------

The documentation for this class was generated from the following files:

- rectangle.h
- rectangle.cpp

3.3 Rectangle Class Reference

Derived class representing a rectangle, inheriting from the [Figure](#) class.

```
#include <rectangle.h>
```

Inheritance diagram for Rectangle:

Collaboration diagram for Rectangle:

Public Member Functions

- `Rectangle ()`
Default constructor for the `Rectangle` class.
- `Rectangle (float scale)`
Constructor for the `Rectangle` class with a scale factor.
- `Rectangle (float width, float height)`
Constructor for the `Rectangle` class with specified width and height.
- `~Rectangle ()`
Destructor for the `Rectangle` class.
- `void display ()`
Function to resize the rectangle.
- `float getWidth () const`
Getter function to retrieve the width of the rectangle.
- `void setWidth (float newWidth)`
Setter function to set a new width for the rectangle.

Additional Inherited Members

3.3.1 Detailed Description

Derived class representing a rectangle, inheriting from the [Figure](#) class.

3.3.2 Constructor & Destructor Documentation

3.3.2.1 [Rectangle\(\)](#) [1/2]

```
Rectangle::Rectangle (  
    float scale )
```

Constructor for the [Rectangle](#) class with a scale factor.

Parameters

<i>scale</i>	Scale factor to determine width and height.
--------------	---

3.3.2.2 [Rectangle\(\)](#) [2/2]

```
Rectangle::Rectangle (  
    float width,  
    float height )
```

Constructor for the [Rectangle](#) class with specified width and height.

Parameters

<i>width</i>	Width of the rectangle.
<i>height</i>	Height of the rectangle.

3.3.3 Member Function Documentation

3.3.3.1 [getWidth\(\)](#)

```
float Rectangle::getWidth ( ) const
```

Getter function to retrieve the width of the rectangle.

Returns

Width of the rectangle in meters.

3.3.3.2 setWidth()

```
void Rectangle::setWidth (
    float newWidth )
```

Setter function to set a new width for the rectangle.

Parameters

<i>newWidth</i>	New width of the rectangle.
-----------------	-----------------------------

The documentation for this class was generated from the following files:

- rectangle.h
- rectangle.cpp
